Ried Jägerberg Weißburgunder 2017

Erste STK Ried

Single Vineyard Jägerberg Pinot Blanc 2017

Premier Cru STK

Grape variety:	**Pinot Blanc (Weißburgunder)**
Vintage:	2017
Awards:	**93 FALSTAFF, 15,5 GAULT MILLAU points**
Alcohol content:	13.0%vol
Total acid:	5.5g/l
Residual suggar:	1.1g/l
Vinification:	**harvested by hand, spontaneously fermented with natural yeasts**
Maturation:	between 6 and 12 months in traditional, large, wooden oak casks
Drinking maturity:	10 years and longer
Bottle closure:	screw cap
Categorisation:	**Erste STK Ried (Premier Cru STK)**
Wine-growing area/ single vineyard :	**Jägerberg**
Local orientation:	south-facing with a medium inclination
Sea level:	320m–380m
Wine-growing region:	**Southern Styria**
Description of the wine:	elegant aroma spectrum; hawthorn, subtle notes of stone fruit, pithy, smoky spiciness in the back; tightly-knit on the palate with vibrating depth
Food recommendation:	thickened soups, white asparagus, chicken liver, quail, veal ("Wiener Schnitzel" = veal escalope viennese style), beef (boiled beef), freshwater fish (carp and catfish)

1 STK ERSTE STK RIED
PREMIER CRU STK

Categorisation: Our wines of the Single Vineyard Jägerberg, classified as "Erste STK Ried" (Premier Cru STK site) are **typical for this region.** These wines demonstrate a strong and natural expression of their origin and have a high ageing potential. The harvest yield is limited to a maximum of 45 hectolitres. Premier Cru STK wines are allowed to be offered for sale at the earliest on 1st of May after 6 months of maturation.

Wine-growing area/ single vineyard: The Single Vineyard Jägerberg is located within the cadastral district Kranach, which belongs to the **village of Gamlitz.**

Climate: On Jägerberg the temperature differences between day and night are smaller - this fact provides **ideal conditions for Burgundy varieties.** These expressive wines reflect a complex aroma spectrum with an enormous tension.

Soil: The vineyards of Jägerberg are located in the tertiary sedimentary region of the "Gamlitz Schlier", also called "Older Schlier". ("Schlier" is a fine-sandy marl clay, in this case with deposits of sandy quartz). The existence of many fossils is a typical character for such chalky, marine sediments. The soil type is a **chalky Regosol of loamy-sandy tertiary material.**
The water retention capacity is high, the water permeability is moderate.
